## PROFESSIONAL SUMMARY

Frontend Engineer with 5+ years of experience building React and TypeScript applications at enterprise scale. Core UI committer on **OpenMetadata** (15k+ GitHub stars) — the open-source platform built by **Collate** — with **1,100+ merged pull requests** across the ecosystem, where I own the **Data Observability** domain, the platform's core differentiator. Built the team's **Playwright test infrastructure** (migrating 600+ tests off Cypress), delivered major product features end-to-end, and mentor frontend engineers while driving architecture decisions and technical hiring.

## TECHNICAL SKILLS

**Languages:** TypeScript, JavaScript (ES6+), HTML5, CSS3

**Frontend:** React.js, Zustand, Context API, Tailwind CSS, Ant Design (AntD), Chakra UI, Sass/SCSS, Responsive Design

**Testing:** Playwright, Cypress, Jest, React Testing Library, E2E Test Architecture

**Build & Tools:** Git, GitHub Actions, CI/CD Pipelines, VitePress, Webpack, ESLint, Prettier

**Visualization:** Recharts, D3.js, Custom Chart Components, Time-Series Graphs

**Backend:** Node.js, REST APIs, Express.js

**Practices:** Design Systems, Code Reviews, Technical Interviewing, Agile/Scrum, Performance Optimization, WCAG Accessibility, Internationalization (i18n)

## PROFESSIONAL EXPERIENCE

### Software Engineer – Frontend | Core UI Committer

*Collate (OpenMetadata) — via Deuex Solutions Pvt. Ltd. | April 2021 – Present (5+ years) | Mumbai, India*

*Collate is the company behind OpenMetadata, an open-source data discovery, observability, and governance platform (15k+ GitHub stars, 1.8k forks) used by enterprises worldwide for metadata management, data quality, and lineage.*

#### Architecture & Feature Ownership

- Architected the **Data Quality UI** from scratch — the platform's core USP and primary enterprise differentiator — delivering test-case management, test-suite workflows, a governance dashboard, glossary-term filtering, and PDF export now used by enterprise data teams worldwide.
- Built the **Data Profiler UI** (column-level dashboards, freshness graphs, cardinality-distribution charts, data-type-aware metrics) and delivered the **Incident Manager** end-to-end from beta to production, streamlining data-incident resolution for data teams across enterprise deployments.
- Implemented **Column-Level Lineage** (tracing, pipeline-as-edge support, expand-all columns, full-screen view, search-in-lineage), enabling users to trace data flow across complex pipelines; also shipped **Data Insights** and **Cost Analysis** for Collate.

#### Testing Infrastructure & Developer Experience

- Founded the project's end-to-end testing practice: stood up the original **Cypress** suite (2021), then architected the **Playwright** infrastructure from scratch (2024) across both repositories — migrating **600+ tests** and removing Cypress entirely to turn a flaky suite into a stable regression safety net that catches bugs before release.
- Built an automated **E2E documentation site** (VitePress + GitHub Actions) with test tagging and CI-generated Playwright docs, improving test discoverability and onboarding speed across the frontend team.
- Drove code-quality and internationalization initiatives across the UI — including resolving **2,282 i18n literal-string warnings** and hardening CI test reporting — measurably reducing flaky failures and preventing regressions from reaching release branches.
- Led UI migration from **Material UI to Tailwind CSS** and a shared component library, establishing a consistent design system adopted across the entire platform.

#### Leadership & Team Impact

- Mentor junior engineers, lead code reviews and uphold code quality as a core committer, conduct frontend technical interviews, and collaborate with product managers, designers, and backend engineers on architecture decisions and roadmap planning.

### Frontend Web Developer (Freelance)

*Priksi | April 2018 – March 2021 | Mumbai, India*

- Delivered 10+ responsive marketing websites for local businesses (HTML, CSS, JavaScript, Bootstrap), owning the full project lifecycle from client consultation through SEO optimization and deployment.

## OPEN SOURCE & PROJECTS

**OpenMetadata — Core UI Committer** — Own the Data Observability UI domain and the Playwright testing infrastructure, with contributions spanning the core platform, documentation, and website repositories.

**Code Snippet Builder** (650+ users) — Drag-and-drop code snippet builder. React, TypeScript, Chakra UI, Appwrite.

**ReactPlay** — Community platform to learn and share ReactJS projects. React, TypeScript, Tailwind CSS.

**Redoc** — Contributed a "Try It" console feature to the open-source OpenAPI documentation tool.

## EDUCATION

**Computer Software Engineering** — Zero To Mastery Academy (2020) | **Diploma in Software Engineering** — APTECH Computer Education (2011–2014)
